

Marintec Innovation webinars:
Chapter 4

Smarter Maritime Logistics

Martin Stopford,
President Clarkson Research

5 November 2020

AGENDA

1. Smarter maritime logistics
- the challenge
2. Smarter maritime logistics
- the cargo transport operation
3. Smarter maritime logistics
- the documentation
4. Smarter maritime logistics
- the security

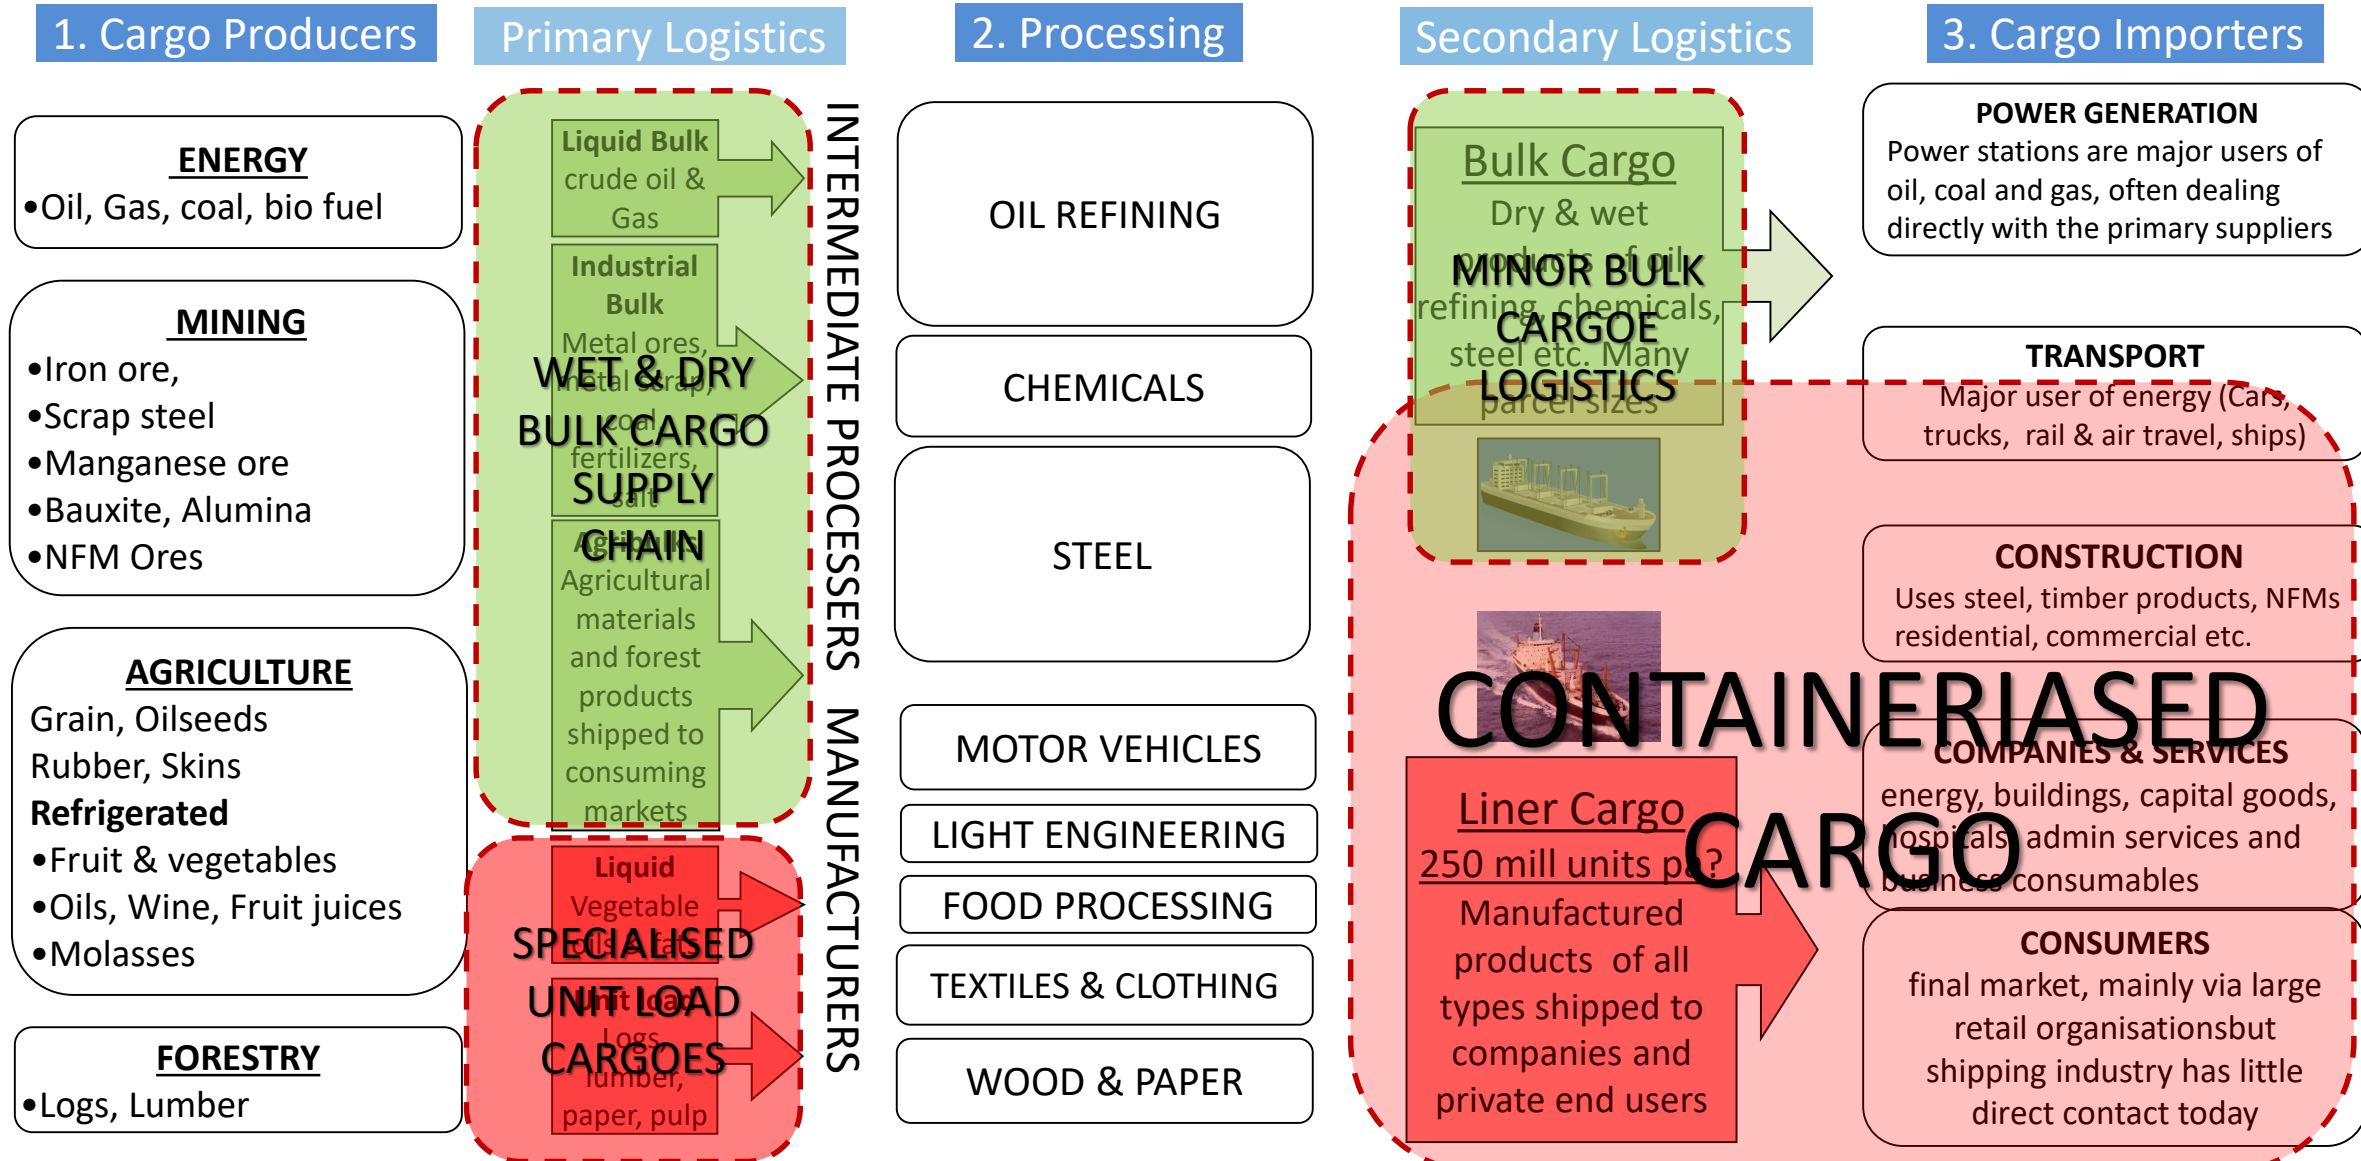

Part 1: Smarter maritime logistics - the challenge

World trade is very diverse and integrating international transport systems is easier for some cargoes than others

Smart Maritime Logistics challenge – better systems for cargoes & clients

Bulk shipping handles less than 200,000 parcels a year, but **liner shipping** handles over 200 million – a big difference

RAW MATERIALS & AGRICULTURE

Smarter transport logistics – three variables

Smart logistics systems should optimize three key variable sets:-

1. Cost, reliability and risk
2. Emissions & environmental impact
3. Journey time & complexity

Management information for each of these is essential to monitor system performance

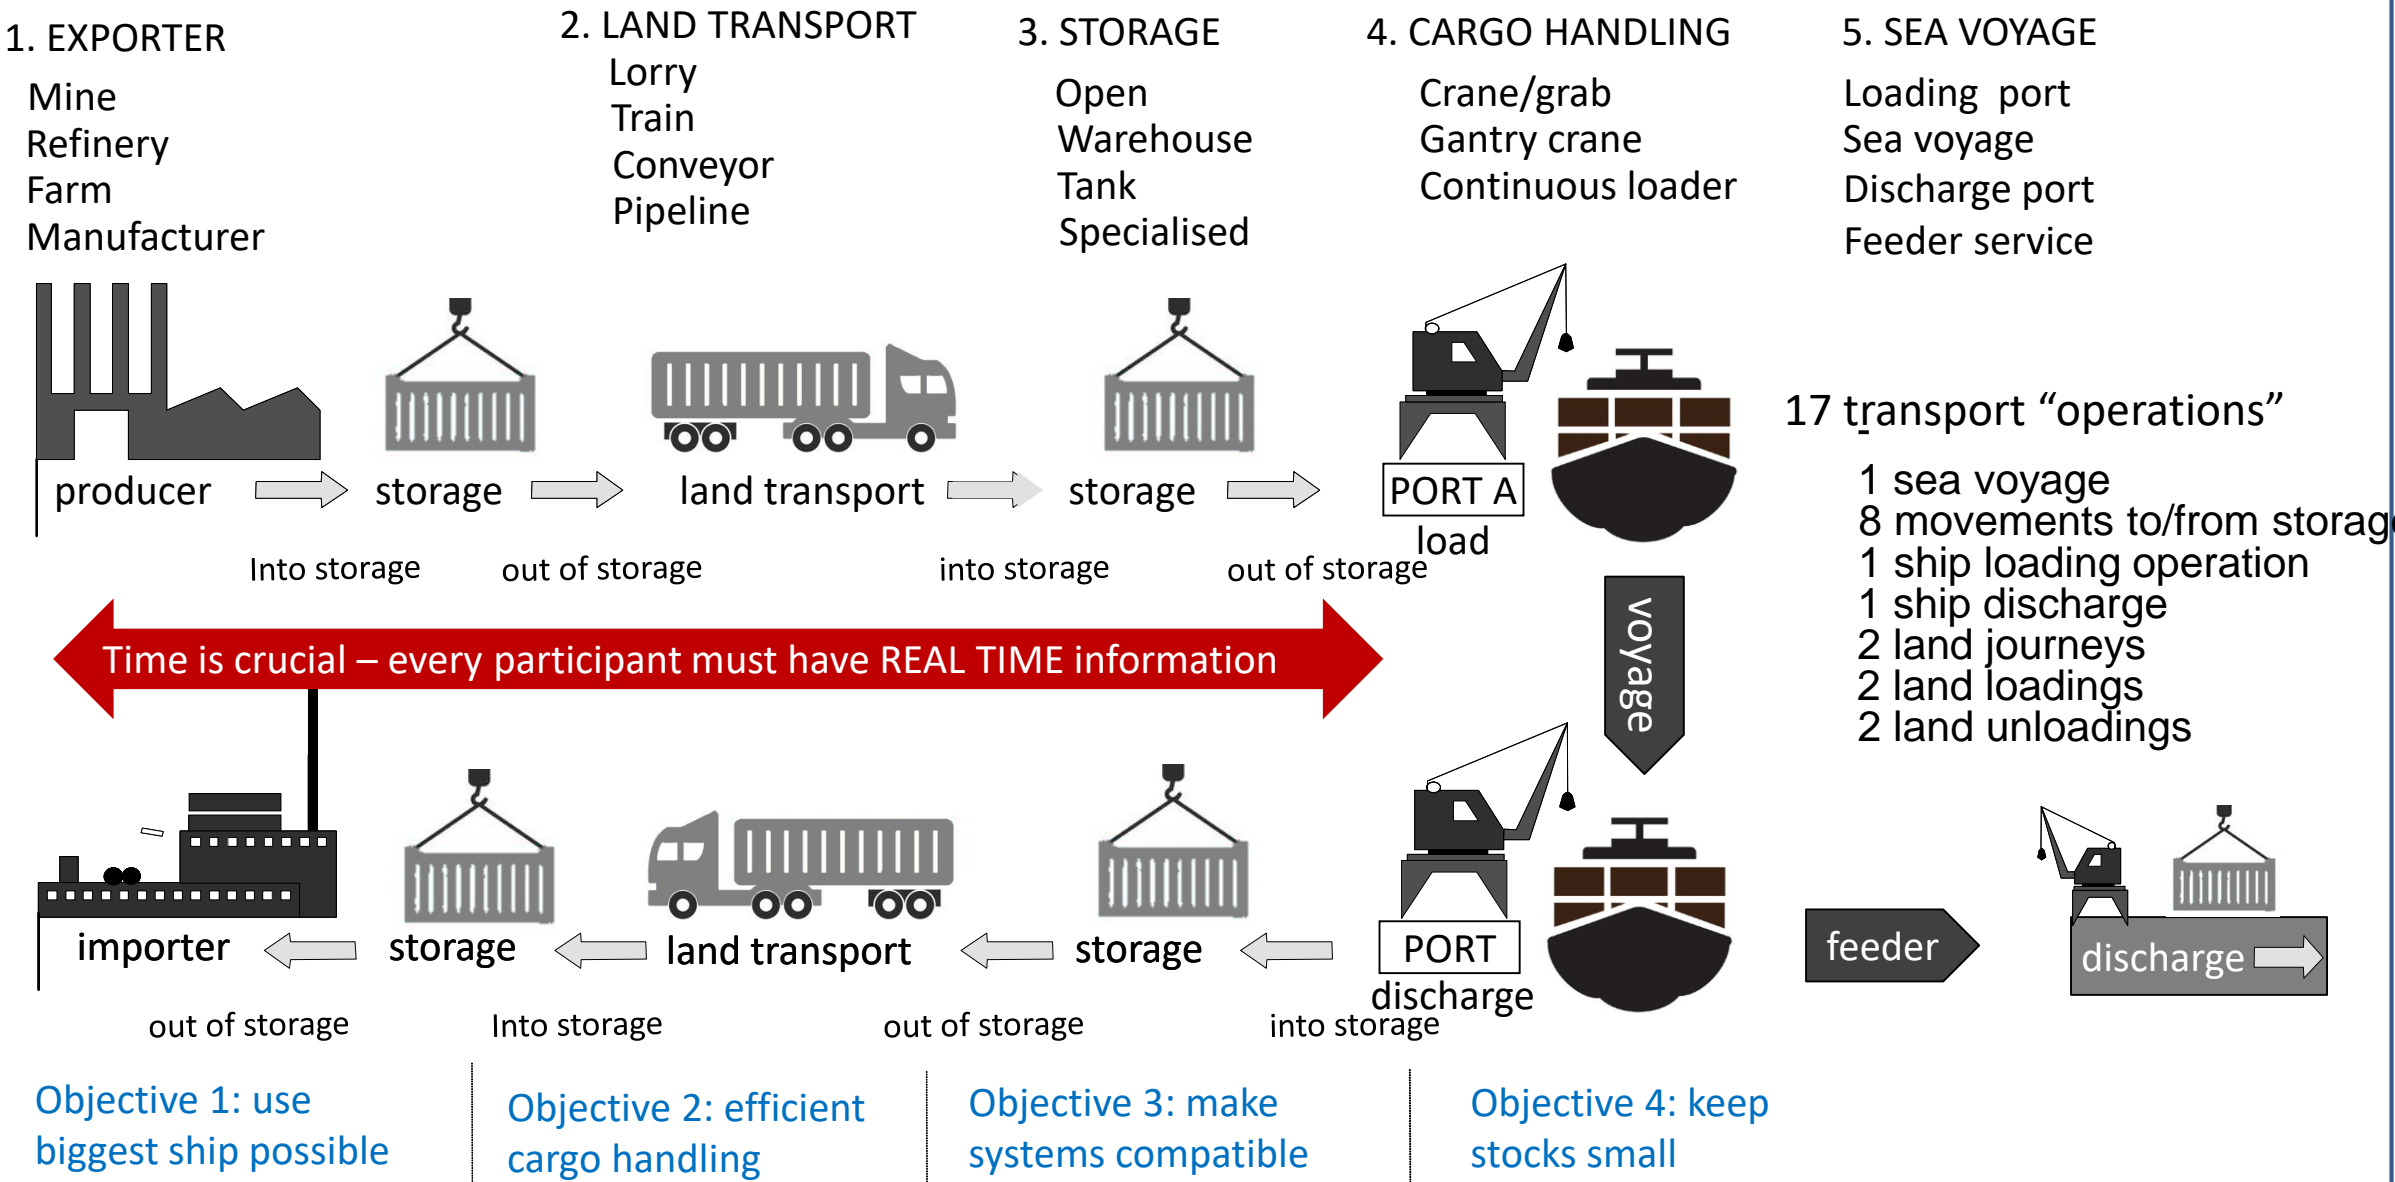

Part 2: Smarter maritime logistics - cargo transport

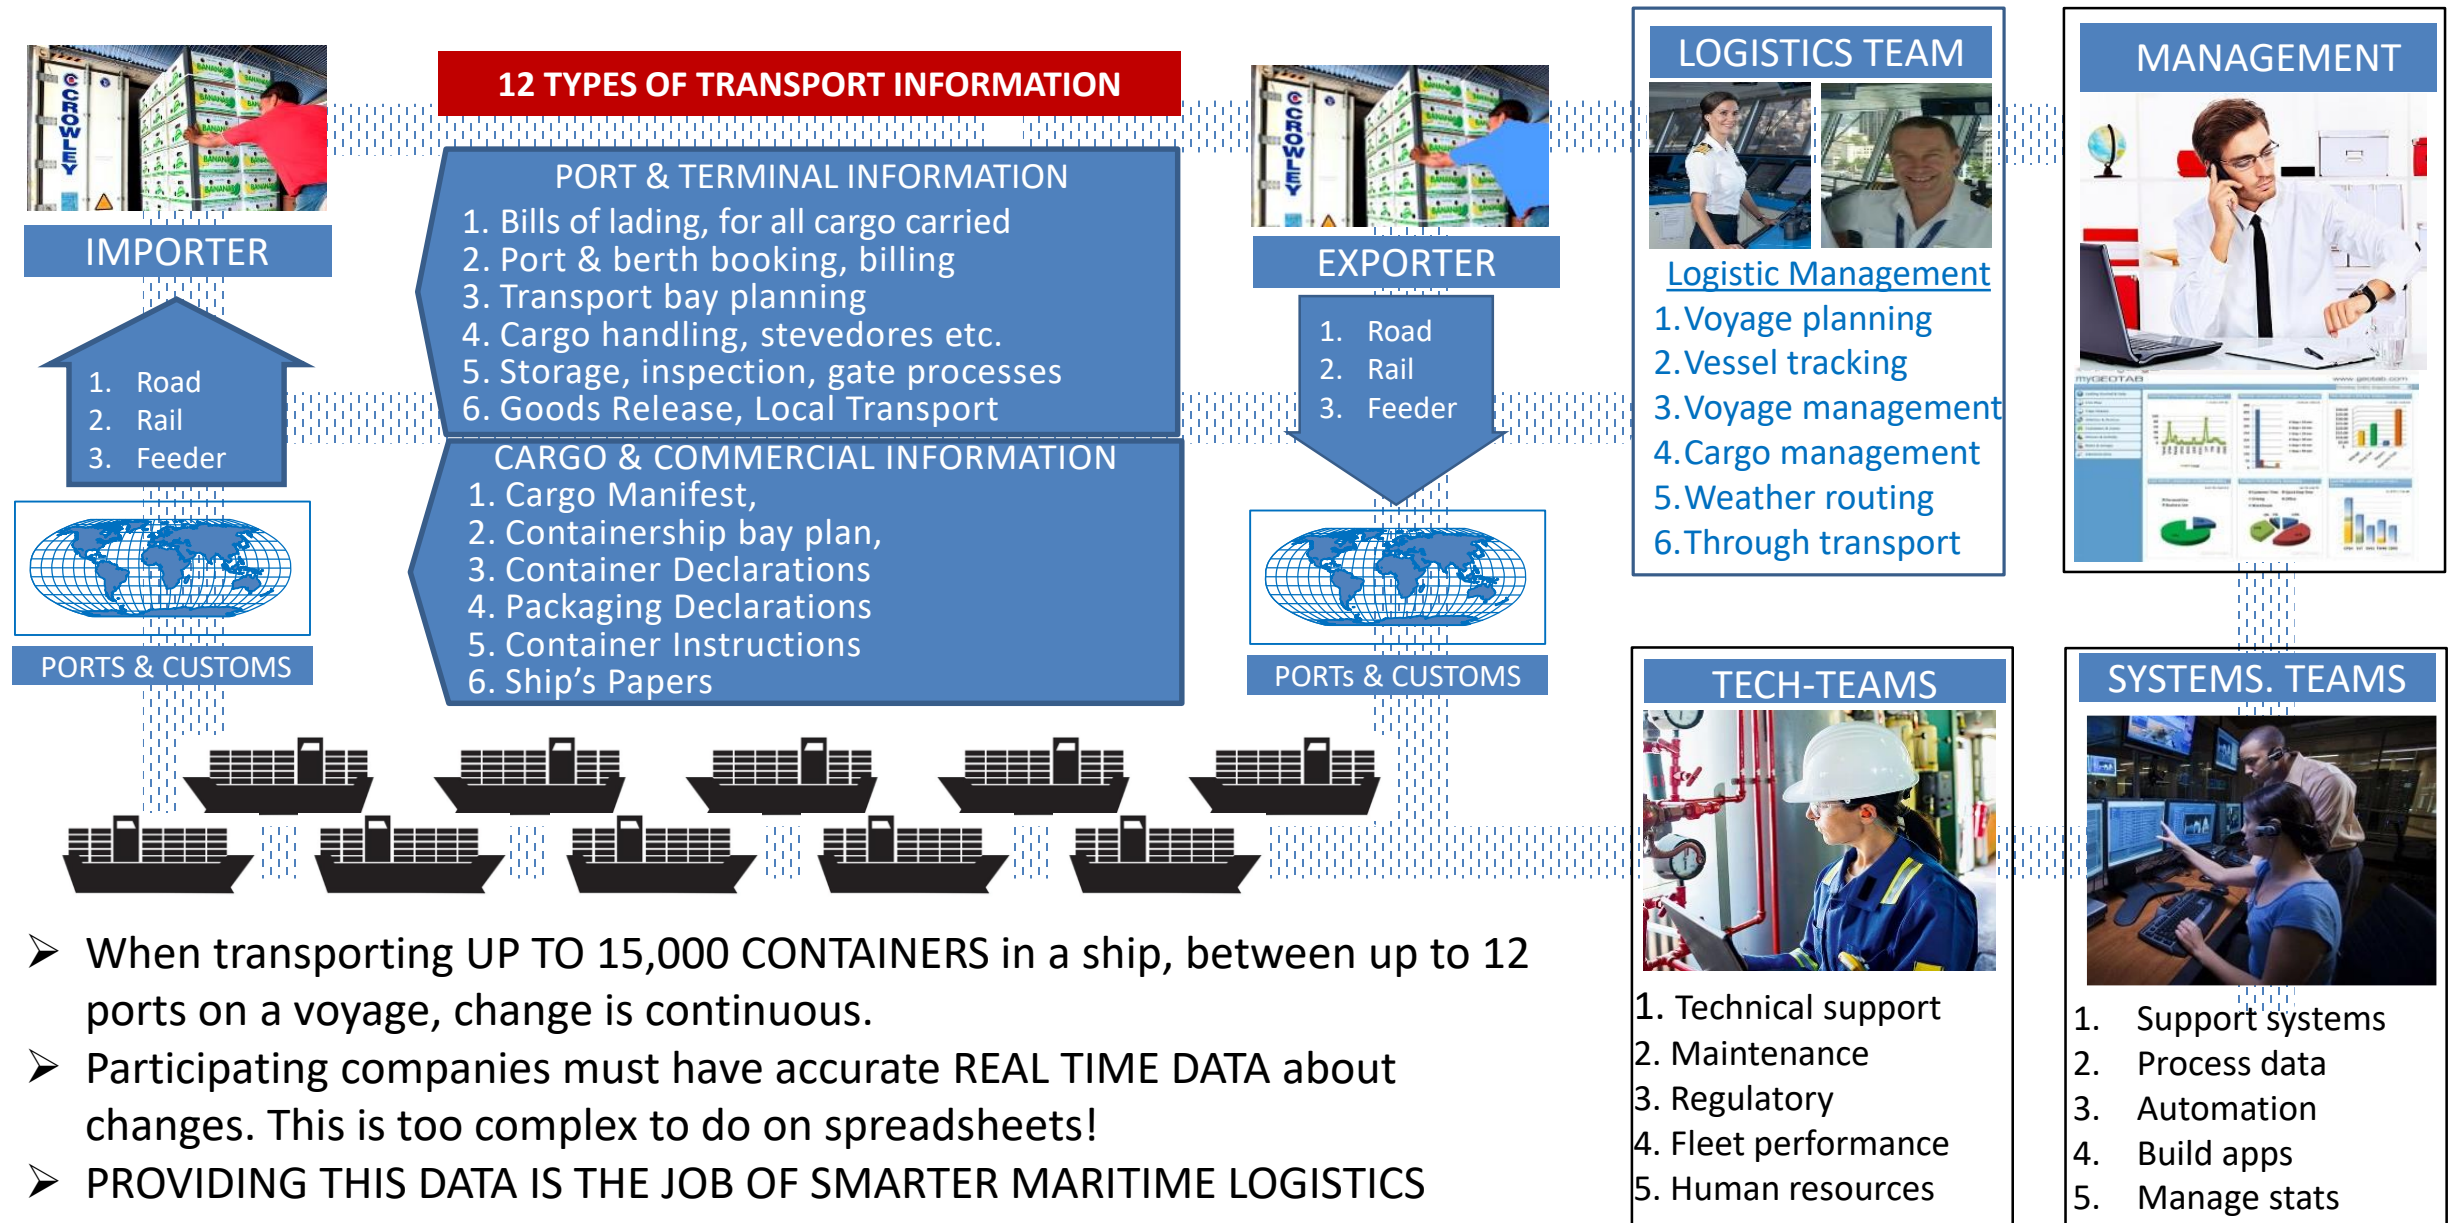

- Through transport involves many operations.
- Inevitably the timeline is constantly changing.
- Real time information is needed

Smarter logistics systems must share *real time* information

Smarter Maritime Logistics for containers requires accurate REAL TIME information

Part 3: Smarter Maritime Logistics - the documentation

Ensuring that each cargo consignment has the DOCUMENTATION needed for through transport is just as important as physical transport

RECEIVED FOR SHIPMENT from the MERCHANT in apparent good order and condition unless otherwise stated herein the goods mentioned

Martin Stopford - Smart Maritime Logistics

Documentation must be streamlined if the “Maritime Transport Factory” is to work efficiently

Transport managers

1. Vessel Owning Common Carriers (VOCC)

1. Manages fleet of ships
2. Cargo transport
3. Docs & Comms
4. Quality control

2. Non-Vessel Owning Common Carrier (NVOCC)

1. Provides freight service
2. Buys space from VOCC
3. Issues bills of lading

3. Freight Forwarder

1. Organise cargo through transport.
2. Book cargo with carriers
3. Process all relevant shipping documents

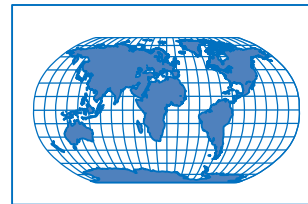

*Non Vessel Owning Common Carrier

EXPORTER

1. Truck
2. Rail
3. Feeder
4. Air
5. Short sea
6. Deep sea

EXPORT PORT

Digital

Paper

Single Window

REQUIRED COMMERCIAL, CUSTOMS, REGULATORY & FINANCE DOCUMENTS

COMMERCIAL DOCUMENTS

1. Bill of lading
2. Commercial Invoice
3. Packing list
4. Certificate of origin
5. Freight invoice
6. Booking note
7. Forwarders cargo receipt
8. Cargo manifest

CUSTOMS DOCUMENTS

1. Bill of lading
2. Invoice & packing list
3. Customs documents
4. Certificate of origin

REGULATORY DOCUMENTS

1. Hazardous declaration
2. Production standards cert. etc.

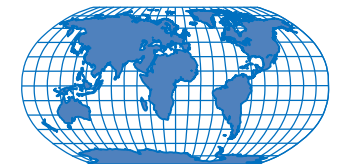

TRADE FINANCE

1. LCs
2. Guarantees
3. Open account

IMPORTER

1. Truck
2. Rail
3. Feeder
4. Air
5. Short sea
6. Deep sea

IMPORT PORT

Digital

Paper

Single Window

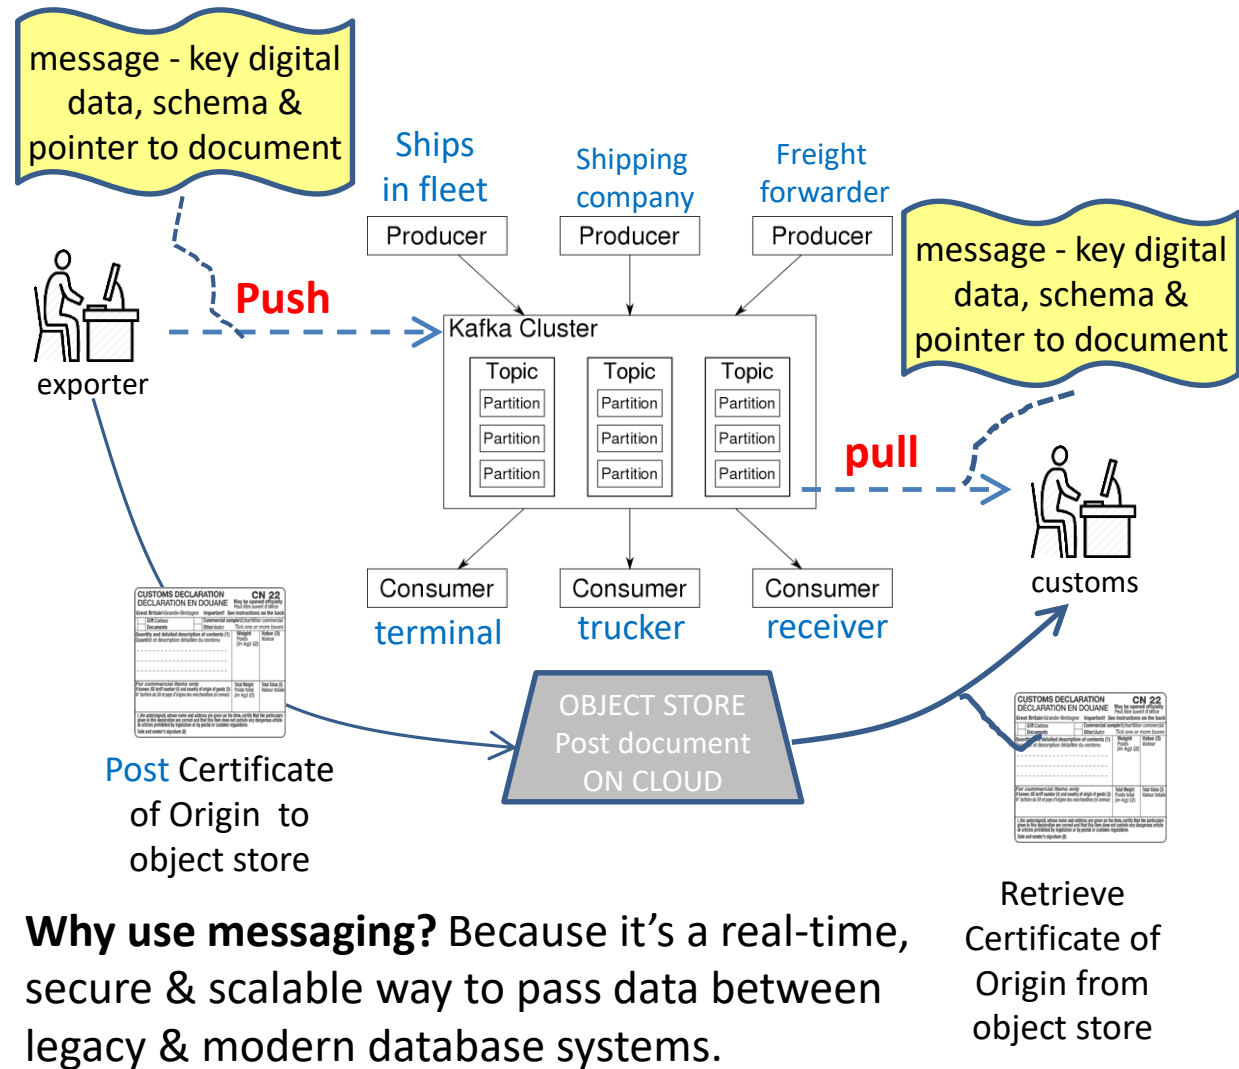

Project to bring together all documentation into a “single window”

Distributed messaging - the ROUTE TO REAL TIME logistics info

- The trade documentation is a mix of digital & paper.
- Company databases not designed to communicate.
- Distributed messaging systems like Apache Kafka, solve this problem by streaming *data* from company databases to a Kafka cluster. Users can “pull it out”.

EXAMPLE : to use messaging to transfer a paper *certificate of origin* and its *data in digital format* to the customs office (and anyone else who needs it), do the following:-

- Scan the Certificate of Origin and post the file to a secure *object store* in cloud.
- Send a message to Kafka Cluster containing key digital data (e.g. from sender’s SQL data table)
- The message contains a pointer to the Certificate of Origin stored in the *object store* & a schema (like a template) to interpret the data in the message.
- Customs computer pulls the message from Kafka Cluster; processes the digital data in the message; & downloads the Certificate of Origin.
- Others in the chain can access the message through the Kafka cluster

Part 4: Smarter maritime logistics - data security

The security and reliability of documents and data is an issue smarter digital technology must address

FAX: [REDACTED]

FIRMS CODE : 7 [REDACTED]

DESCRIPTION OF CHARGES AND DUES
IMPORT HANDLING CHARGE

PLEASE SEND US PAYMENT AND ENDORSED ORIGINAL BILL OF LADING FOR FREIGHT RELEASE.
NOTE: CY/DOOR - TO BE ADVISED.
PLEASE FORWARD TO YOUR CUSTOMS BROKER TO FILE ENTRY ASAP.

USD
TOTAL

NOTES:

THIS ARRIVAL NOTICE/INVOICE CONSISTS OF TWO PAGES. DELIVERY TO CONSIGNEE WILL BE MADE ONLY IF ACCOMPANIED BY OUR STANDARD TERMS AND CONDITIONS OF SERVICE, WHICH APPEARS ON THE FIRST PAGE. IF THESECOND PAGE IS NOT RECEIVED IN THIS FAX TRANSMISSION OR E-MAIL, PLEASE REMIT TO AT [REDACTED] X), INC AT [REDACTED] 91788, ATTN: OCEAN IMPORT [REDACTED]
PLEASE SURRENDER ENDORSED ORIGINAL BILL OF LADING AND ALL COLLECT CHARGES 48 HOURS PRIOR TO VESSEL ARRIVAL.

Martin Stopford - Smart Maritime Logistics

Data compatibility & security issues

- Validation by agencies issuing documents & data
- Preventing fraud on key documents like bill of lading
- Security systems (Blockchain etc.) an essential part of Smarter Maritime Logistics systems

4. Conclusions

- Smart Maritime Logistics is tough because it involves many companies, institutions & data management setups.
- Solutions including the Single Window & Mona Lisa 2 (Sea Traffic Management) are valuable, but difficult to involve everyone in the transport chain
- Distributed messaging solutions like Apache Kafka etc can deliver real time data and documents through the whole supply chain
- Because messaging systems are scalable they can be used by small companies as well as big corporations
- Diverse supply chains can tailor messaging to provide the data transfers they need for their specific operations

A man with short brown hair and black-rimmed glasses is shown from the chest up. He has a wide-eyed, open-mouthed expression of surprise or realization. He is wearing a light-colored, vertically striped button-down shirt. A blue speech bubble originates from the right side of his face, containing the text 'The message is "messaging!"'. The background is a plain, light-colored wall.

The
message is
“messaging!”
